Highlights

- Highlights are great to make your paper more visible.
- They should be short sentences.
- They should give important points.

Introduction

Just put your introduction here. This is acting as a documentation. First section illustrates the inclusion of figures (Section 1). There is a section about bibliography (Section 2) and subsections for backreferencing (Section 2.1) and doi integration (Section 2.2). Another section is showing how to include programming code (Section 3).

Here is some latin jibberjabber to add some text: Maece-nas volutpat nulla at tellus commodo fermentum. Vestibulum non lacus et lectus consectetur blandit ac eget diam. Sed cursus eros vel mauris consectetur rhoncus non non velit. Vestibulum porta convallis mauris quis varius. Suspendisse eu odio non lacus imperdiet sollicitudin et ut orci. Cum sociis natoque penatibus et magnis dis parturient montes, nascetur ridiculus mus. Vivamus volutpat feugiat congue. Sed scelerisque nulla quis risus gravida mollis. Pellentesque suscipit varius est vitae eleifend. Nam euismod nisi nec diam gravida tristique. Pellentesque habitant morbi tristique senectus et netus et malesuada fames ac turpis egestas. Aenean convallis imperdiet ligula, sit amet finibus lectus maximus eget. Quisque non euismod ex, interdum dignissim tortor. Morbi facilisis metus dolor, eget rhoncus justo hendrerit sed.

1 Figures

This is to show how to include a figure. There are single column figures (Fig. 1) and full width figures (Fig. 2).

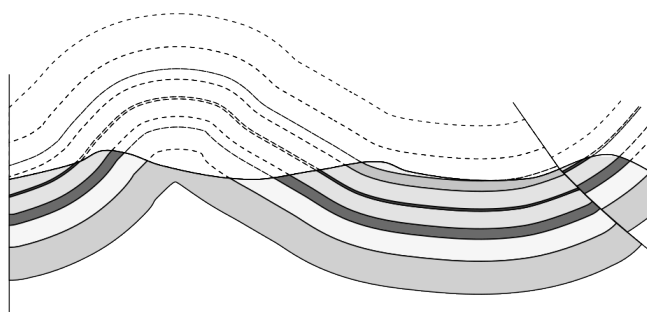

Figure 1 In sed rutrum felis. Cras convallis libero vel arcu euismod, ut ultricies dolor pellentesque. Nullam congue, mauris et volutpat imperdiet (modified from G. Laurent [2023]).

2 Bibliography

2.1 Special references backref

A back reference is automatically added in the bibliography listing, but it requires an extra compilation to get the page right.

2.2 DOI and HAL integration

There is a command in the template that automatically format the doi references in the bibliography. All it should take is to make sure the doi is listed in the bib file under the “doi” keyword. It will appear between chevron brackets as a link to doi.org.

If you have listed papers that are in HAL archives you can add them as an extra keyword in the bib file

```
hal = {insu-04182730}
```

3 Code

You can include code inline like this Myclass. For this, the words need to be added to the lstlisting settings at the start. They can be coloured differently depending on there natures: class, method, attribute or variables. Comments also have a special colour and strings too, which generally require to have " characters around like in "A string".

Off course, you can also make code listings with the “lstlisting” environment:

```
1 from package import MyClass
2 a = MyClass()
3 a.my_var = a.my_method()
4 print("Example done !")
```

Appendix A Appendices

This is to show how to handle appendices and figures in it (figure A.1).

Maecenas volutpat nulla at tellus commodo fermentum. Vestibulum non lacus et lectus consectetur blandit ac eget diam. Sed cursus eros vel mauris consectetur rhoncus non non velit. Vestibulum porta convallis mauris quis varius. Suspendisse eu odio non lacus imperdiet sollicitudin et ut orci. Cum sociis natoque penatibus et magnis dis parturient montes, nascetur ridiculus mus. Vivamus volutpat feugiat congue. Sed scelerisque nulla quis risus gravida mollis. Pellentesque suscipit varius est vitae eleifend. Nam euismod

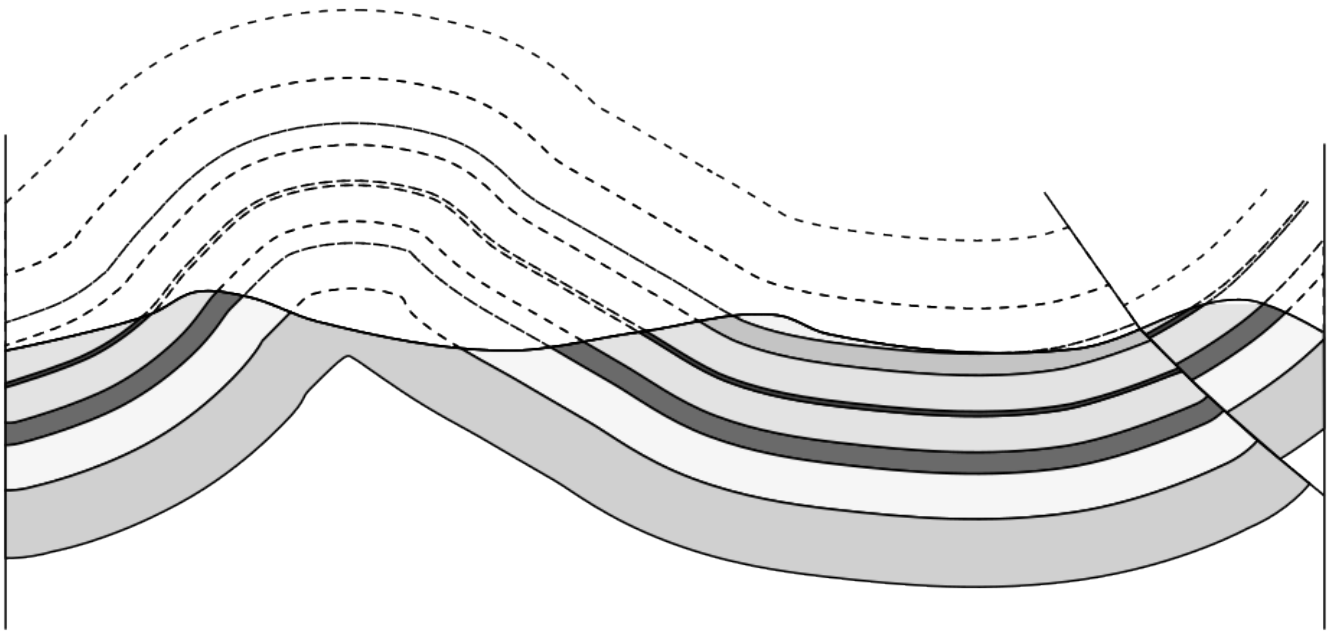

Figure 2 In sed rutrum felis. Cras convallis libero vel arcu euismod, ut ultricies dolor pellentesque. Nullam congue, mauris et volutpat imperdiet (modified from [G. Laurent \[2023\]](#)).

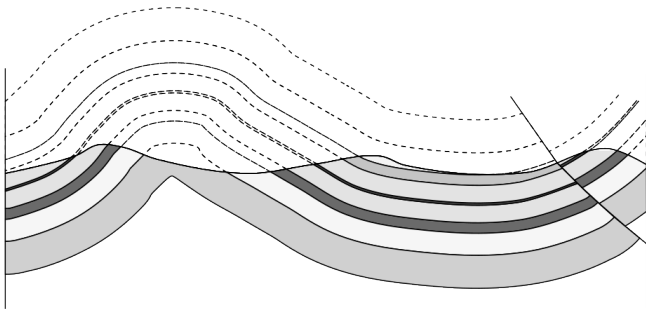

Figure A.1 This is to show appendix figures are numbered differently.

nisi nec diam gravida tristique. Pellentesque habitant morbi tristique senectus et netus et malesuada fames ac turpis egestas. Aenean convallis imperdiet ligula, sit amet finibus lectus maximus eget. Quisque non euismod ex, interdum dignissim tortor. Morbi facilisis metus dolor, eget rhoncus justo hendrerit sed.
